## Abstract

Let $F_{2^{m}}$ be a finite field of $2^{m}$ elements, and
$R=F_{2^{\prime \prime}}[u] \mid\left\langle u^{k}\right\rangle=F_{2^{\prime \prime}}+u F_{2^{\prime \prime}}+\cdots+u^{k-1} F_{2^{\prime \prime}}\left(u^{k}=0\right) \quad$ where $k$ is an integer satisfying $k \geq 2$. For any odd positive integer $n$, an explicit representation for every self-dual cyclic code over ${ }_{R}$ of length $2 n$ and a mass formula to count the number of these codes are given first.
